Report on Review of the Interim Financial Statements

To : Board of Directors of National Bank of Kuwait - Egypt "S.A.E."

Introduction

We have reviewed the accompanying financial position of National Bank of Kuwait – Egypt S.A.E. as at 31 March 2020 and the related statements of income, other comprehensive income, changes in shareholders' equity and cash flows for the three months period then ended, and a summary of significant accounting policies and other explanatory notes. Management is responsible for the preparation and fair presentation of these interim financial statements in accordance with the rules of preparation and presentation of the banks' financial statements issued by the Central bank of Egypt on 16 December 2008 as amended by regulations issued on 26 February 2019 and with the requirements of the applicable Egyptian laws and regulations, our responsibility is to express a conclusion on these interim financial statements based on our review.

Scope of the limited review

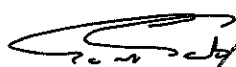

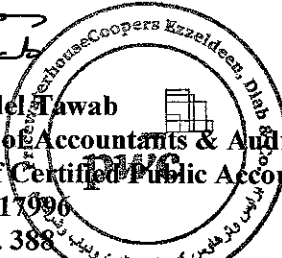

We conducted our review in accordance with the Egyptian Standard on Review engagements (2410), "Review of Interim Financial Statements performed by the Independent Auditor of the Entity". A limited review of interim financial statements consists of making inquiries, primarily of persons responsible for financial and accounting matters in the bank and applying analytical and other limited review procedures. A limited review is substantially less in scope than an audit conducted in accordance with the Egyptian Standards on Auditing and consequently does not enable us to obtain assurance that we would become aware of all significant matters that might be identified in an audit. Accordingly, we do not express an audit opinion on these interim financial statements.

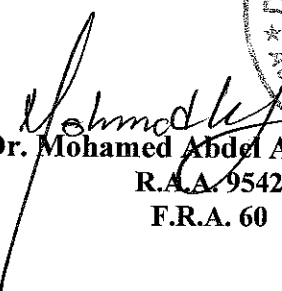

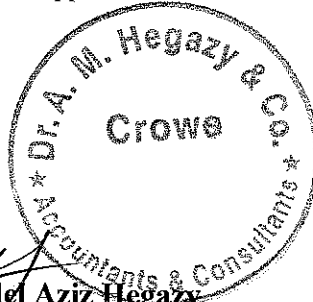

Conclusion

Based on our limited review, nothing has come to our attention which causes us to believe that the accompanying interim financial statements do not present fairly, in all material respects, the financial position of the bank as at 31 March 2020, and its financial performance, and cash flows for the three months period then ended in accordance with the rules of preparation and presentation of the banks' financial statements issued by the Central bank of Egypt on 16 December 2008 and the amendments issued under the instructions of 26 February 2019, and with the related requirements of the applicable Egyptian laws and regulations.

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)

Notes to the Financial Statements - For the period ended 31 March 2020

1. General information

The bank was established under the name of (Al Watany Bank of Egypt), an Egyptian Joint Stock Company under the Investment Law No (43) for 1974, and its amendments as the bank now is under the Investment law No (72) for 2017, The Bank's head office is located in First Sector, Plot 155, City Centre, New Cairo and is listed in stock exchange of Cairo and Alexandria.

On 24 March 2013, the Extraordinary General Assembly resolved that the Bank's name is to be amended from Al Watany Bank of Egypt to become National Bank of Kuwait - Egypt. Such amendment has been approved and published in the Commercial Register on 29 April 2014.

National Bank of Kuwait - Egypt provides corporate and retail banking services and investment in the Arab Republic of Egypt through 51 branches, and 1,830 employees at the date of the Balance sheet compared to 31 December 2019, which were 51 branches, and 1,766 employees.

2. Summary of accounting Policies

The principal accounting policies applied in the preparation of these financial statements are set out below. These policies have been consistently applied to all the periods presented, unless otherwise stated.

A) Basis of financial statements preparation

The financial statements are prepared in accordance with rules of preparation and presentation of banks' financial statements, basis of recognition and measurement approved by the Board of Directors of the Central Bank of Egypt on 16 December 2008, along with the requirements of IFRS 9 "Financial Instruments" according to the instructions issued by the Central Bank of Egypt on January 28, 2018, and as amended on 26 February 2019, in light of the Egyptian Accounting Standards issued during 2015, as amended and the related local laws.

B) Associates

Associates are establishments in which the Bank has, directly or indirectly, significant influence, but it does not reach to the extent of control, and usually the Bank holds from 20% to 50% of the voting rights.

The purchase accounting method is used for the Bank's acquisition of companies. The cost of acquisition is measured at the fair value of the assets or the consideration provided by the Bank for the assets of purchase, and/ or issued equity instruments and/ or liabilities incurred by the Bank, and/or liabilities accepted on behalf of the acquiree at the transaction date, plus any costs directly attributable to the acquisition. Net assets including identifiable contingent liabilities are measured at their fair value at the date of acquisition, irrespective of the minority interest. The excess in acquisition cost over the fair value of the Bank's share in the net assets acquired is recorded as goodwill. If the acquisition cost is less than the fair value of the net assets, the difference is recognized directly in the statement of profits and losses under other operating income (expenses).

C) Segment reporting

A business segment is a group of assets and operations engaged in providing products or services that are subject to risks and rewards different from those of other business segments. A geographical segment is engaged in providing products or services within a particular economic environment that are subject to risks and rewards different from those of geographical segments operating in different economic environments.

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)

Notes to the Financial Statements - For the period ended 31 March 2020

D) Foreign currency transaction

D/1 Functional and presentation currency

The Bank's financial statements are presented in Egyptian Pound (EGP), which is the Bank's functional and presentation currency.

D/2 Transactions and balances in foreign currencies

The Bank keeps its accounting records in Egyptian pound. Foreign currency transactions during the financial year are translated using the exchange rates prevailing at the date of the transaction. All monetary assets and liabilities balances in foreign currencies at the financial position date are revaluated based on the exchange rates prevailing at that date. Foreign exchange gains and losses resulting from settlement of such transactions and valuation differences are recognized in the statement of profits and losses under the following sections:

- Net income on financial instruments at fair value through profits and losses for assets/ liabilities initially designated at fair value through profits and losses according to the type.
- Other operating income (expenses) for the remaining items.
- Among other comprehensive income items of owners' equity with regard to financial derivatives as qualifying hedge (eligible) for cash flows or as qualifying hedge for net investment.
- Among other comprehensive income items of owners' equity with regard to financial investments from equity instruments at fair value through other comprehensive income.
- Changes in the fair value of monetary financial instruments in foreign currency classified as investments at fair value are analyzed within the other comprehensive income through differences from changes in amortized costs of the instrument, differences from changes in the prevailing exchange rates, and differences from changes in the fair value of the instrument. Differences related to changes in the amortized cost are recognized into statement of profits and losses under interest income from loans and similar revenues, and those related to the changes in the exchange rates under other operating income (expenses). Differences from changes in the fair value (fair value reserve/ financial investments at fair value through other comprehensive income) are recognized within owners' equity of comprehensive income items.
- Valuation differences resulting from non-cash items include profits and losses from change in fair value such as equity instruments at fair value through profits and losses. Valuation differences result from equity instruments classified as financial investments at fair value through other comprehensive income statement are recognized in statement of other comprehensive income.

E) Financial assets and liabilities

E-1 Initial recognition and measurement

The Bank conducts initial recognition of financial assets and liabilities on the date on which the bank becomes a party in the contractual conditions of financial instrument.

The financial asset or liability is initially measured at fair value. With regard to assets or liabilities that are not subsequently measured at fair value through profits and losses, it would be measured at fair value plus cost of transaction that is connected directly with acquisition or issuance.

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)

Notes to the Financial Statements - For the period ended 31 March 2020

Business model valuation

- 1) Debt instruments and equity instruments are classified and measured as follows:

Financial Instrument	Method of measurement as per the business model		
	Amortized cost	Fair value	
		Through other comprehensive income	through profit or loss
Equity Instrument	-	One-time option upon initial recognition Irrevocable	Normal transaction for equity instruments
Debt instruments	Business model of assets held to collect contractual cash flows	Business model of assets held to collect contractual cash flows and sale	Business model of assets held for trading

- 2) The Bank shall prepare, document and approve Business Model in compliance with IFRS 9 requirements to reflect the bank's strategy made for managing financial assets and its cash flows as follows:

Financial asset	Business model	Principal characteristics
Financial assets at amortized cost	Business model for Financial Assets Held to collect contractual cash flows	<ul style="list-style-type: none"> ▪ The objective of the business model is to retain financial assets to collect the contractual cash flows represented in the principal amount of the investment and the interests. ▪ A sale is an exceptional contingent event for the purpose of this model and under the terms of the Standard comprising deterioration in the creditworthiness of the issuer of the financial instrument. ▪ Lowest sales in terms of periodic and value. ▪ A clear and reliable documentation process for the justifications of each sale and its conformity with the requirements of the Standard shall be conducted by the bank.
Financial assets at fair value through other comprehensive income	Business model for financial assets held to collect contractual cash flows and sale	<ul style="list-style-type: none"> ▪ Both the collection of contractual cash flows and sale are complementary to the objective of the model. ▪ High sales (in terms of turnover and value) compared to the business model held for the collection of contractual cash flows.
Financial assets at fair value through profits and losses	Other business models, which include (trading - management of financial assets based on fair value - maximising cash flows through sale)	<ul style="list-style-type: none"> ▪ The objective of the business model is not to hold the financial asset for the collection of contractual cash flows or hold the financial asset to collect contractual cash flows and sale. ▪ The collection of contractual cash flows is a contingent event for the objective of the model. ▪ Management of financial assets by the management at fair value through profits and losses to avoid accounting inconsistencies.

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)

Notes to the Financial Statements - For the period ended 31 March 2020

- The Bank shall evaluate the purpose of business model at the level of portfolio in which the financial asset is held to reflect the method of management and supplying information. Such information taken into consideration when evaluating the business model shall include the following:
 - Documented approved policies and portfolio's objectives and application of such policies in practice. In particular, whether the management's strategy focuses only upon collection of contractual cash flows and holding a definite interest rate to compare maturity dates of financial assets with maturity dates of liabilities that finance such assets or generates cash flows from sale of assets.
 - Way of evaluating and reporting on portfolio's performance to senior management.
 - Risks that affect business model performance including nature of financial assets held in such model and the way of managing such risks.
 - Way of evaluating the performance of business managers (fair value and/or interest on portfolio, or both).
 - Periodic, value and date of sale transactions in previous periods, reasons of such transactions, and forecasts regarding future sale activities. However, information regarding sale activities is not taken into consideration separately but as a part of a whole comprehensive valuation of how to achieve the bank's objective from managing the financial assets and how to generate cash flows.
 - The financial assets held for trading, or managed and its performance valued on basis of fair value are measured at fair value through profits and losses since they are not held to collect contractual cash flows or to collect contractual cash flows and sell financial assets together.
- **Assessment of whether the contractual cash flows of an asset represent payments restricted upon principal amount of instrument and interest**

For purpose of this valuation, the bank identifies the principal amount of financial instrument as the fair value of financial asset upon initial recognition. Further, the bank identifies the interest as time value of money and credit risks related to the principal amount during specific period and other main loan risks and costs (such as liquidity risks and administrative costs) in addition to profit margin.

In order to evaluate whether the contractual cash flows of the asset are represented in payments restricted upon the principal of financial instrument and interest, the bank takes into its consideration the contractual conditions of the instrument. This includes valuation of whether the financial asset includes contractual conditions that may change date or amount of contractual cash flows which result in breach of this condition. In order to carry out such valuation, the bank takes into consideration the following matters:

- Potential events that may change the amount or date of cash flows.
- Specifications of financial leverage (interest rate, terms, currency type ...).
- Terms of accelerated payment and term extension.
- Terms that may limit the bank's ability to claim cash flows from certain assets.
- Specifications that may be amended for time value of cash (periodically repricing interest rate).

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)

Notes to the Financial Statements - For the period ended 31 March 2020

Reclassification

- The financial assets are reclassified upon initial recognition only if the bank changes business model of managing such assets.
- In all cases, reclassification between financial liabilities at fair value through profits and losses and financial liabilities at amortized cost are not conducted.

E/3 De-recognition

1- Financial assets

- The financial asset is excluded when the effective period of contractual right to obtain cash flows from financial asset expires or the bank transfers the right to receive contractual cash flows in a transaction whereby the risks and benefits associated materially with ownership are transferred to another party.
- When a financial asset is excluded, difference between asset's book value (or book value allocated to part of the excluded principal) and total of received consideration (including any new asset obtained less any new commitment incurred) and any consolidated profits and losses has been previously recognized in the fair value reserve of financial investments at fair value through statement of other comprehensive income is recognized in statement of profits and losses.
- As of January 1, 2019, any accumulated profit or loss recognized in statement of other comprehensive income related to investing in equity instruments allocated as investments at fair value through statement of other comprehensive income are not recognized in profits and losses upon disposal of such asset. Any share resulted or held from the asset qualified for disposal (eligible for disposal) shall be recognized as separate asset or liability.
- When the bank makes transactions whereby it transfers assets that have been previously recognized in statement of financial position, but materially held most of risks and benefits associated with the transferred asset or part of it. In such cases, the transferred asset shall not be excluded.
- In respect of transactions in which the bank does not materially hold or transfer all risks and benefits associated with asset ownership and hold control over the asset, the bank continues to recognise the asset within the limitation of its continuous commitment to financial asset. The continuous commitment of the bank to the financial asset shall be determined based on the bank's exposure to changes in value of transferred asset.
- In some transactions, the bank holds the commitment to provide transferred asset in return for commission. Thereupon, the transferred asset shall be excluded if it meets the exclusion conditions. An asset or liability to provide service is recognized if the service commission is higher than the appropriate amount (asset) or less than the appropriate amount (liability) to perform the service.

2- Financial liabilities

- The bank shall exclude financial liabilities when the financial liability is excluded or cancelled or its term set forth in the contract expires.

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)

Notes to the Financial Statements - For the period ended 31 March 2020

E/4 Adjustments to financial assets and liabilities

1- Financial assets

- If the terms of a financial asset are amended, the bank shall evaluate whether the cash flows of adjusted asset are materially different. If the cash flows materially differ, the contractual rights of cash flows from the principal financial asset shall be considered expired and hence the principal financial asset shall be excluded and the new financial asset shall be recognized at fair value and the value resulted from adjusting aggregate book value shall be recognized as profits or losses under profits and losses. On the other hand, if such adjustment has occurred due to financial difficulties of the borrower, the profits have to be deferred and presented with aggregate impairment losses whilst losses have to be recognized in the statement of profits and losses.
- If the cash flows of adjusted asset recognized at amortized cost do not materially differ, the adjustment shall not result in exclusion of financial asset.

2- Financial liabilities

- The Bank may adjust a financial liability when its terms are amended and the cash flows of adjusted liability will materially differ. In such case, a new financial asset is recognized according to the amended terms at fair value. The difference between book value of old financial liability and new financial liability shall be recognized in accordance with amended terms in the profits and losses.

Offsetting financial assets and liabilities

Financial assets and liabilities are offset when there is a legally enforceable right to offset the recognized amounts and there is an intention to settle on a net basis or realise the asset and settle the liability simultaneously.

An offset between only revenues and expenses shall be made, if permitted in accordance with Egyptian Accounting Standards, or profit or loss results from similar groups because of trading or transfer differences of balance of foreign currency cash assets and liabilities or profits (losses) result from foreign currency operations.

F) Fair value measurement

- The Bank sets the fair value on basis that it is the price that will be obtained for the sale of an asset or will be paid for transfer of a liability in a transaction made between the participants in the market on measurement date taking specifications of the asset or liability into consideration when measuring the fair value if the participants in the market took such specifications into consideration when pricing the asset and/or liability on measurement date as such specifications include status and position of the asset and restrictions upon sale or use of the asset as per the perspective of participants in the market.
- The Bank uses market methodology to determine fair value of financial assets and liabilities as such methodology uses other relevant prices and information result from market transactions that include assets or liabilities or set of assets and liabilities and are typical or comparable. Accordingly, the Bank uses valuation methods that are in consistent with market methodology such as market multiples derived from comparable sets. Thereupon, it is required to opt for the appropriate multiplier within range using personal judgement taking into consideration both quantitative and qualitative factors of the measurement.

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)

Notes to the Financial Statements - For the period ended 31 March 2020

- When it can not be relied upon the market approach to determine the fair value of a financial asset or financial liability, the Bank uses the income approach to determine fair value whereby future payments such as cash flow or income and expenses are transferred to current amount (discounted) so that the fair value measurement reflects current market expectations about future payments.
- When it can not be relied upon market approach or income approach to determine the fair value of a financial asset or financial liability, the Bank uses the cost method to determine fair value in order to reflect the amount currently claimed to replace the asset in its current state (the current replacement cost) so that the fair value reflects the cost incurred by the participant in the market as a buyer of acquiring an alternative asset of similar benefits since the participant in the market as a buyer will not pay for an asset more than the amount that replaces benefit of the asset.

F/1) Financial instruments through first stage:

The fair values of financial instruments traded in an active market are determined based on quoted prices at the reporting date. The market is active when the items that are dealt with in the market are identical and that there are usually buyers and sellers willing to deal at any time normally. The Bank has used the quoted bid price to determine the fair value of this level. Instruments included in the first tier include investments held for trading on exchanges.

F/2) Financial instruments through second stage:

Fair values of financial instruments not traded in an active market are determined using valuation techniques. Valuation techniques are based primarily on observable inputs to the asset or liability, whether direct or indirect. The determination of fair value is included in the second level if all significant inputs are observable for the duration of the financial asset or liability, but if one of the significant inputs is not observable, the financial instrument is included in the third level.

Specific valuation techniques used to determine fair values of financial instruments include:

- Quoted prices for similar assets or liabilities in active markets.
- Interest rate swaps by calculating the present value of the estimated future cash flows based on observable yield curves.
- The fair value of forward foreign exchange contracts is determined using the current value of the expected cash flows by using the future foreign exchange of the currency of contract.
- Analysis of deducted cash flows to determine fair values of other financial instruments.

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)

Notes to the Financial Statements - For the period ended 31 March 2020

G) Financial derivatives instruments and hedge accounting

Derivatives are recognized at fair value on the date on which a derivative contract is entered into and are subsequently re-measured at their fair value. Fair value is obtained from market prices quoted in active markets, recent market transactions or valuation techniques such as discounted cash flow models and options pricing models, as the case may be. All derivatives are presented within the assets if the fair value is positive, or within obligations if the fair value is negative.

Embedded derivatives contracts are not separated when the derivative is associated with a financial asset and therefore all embedded derivatives contract are classified with the financial asset associated therewith.

The method of recognition of profits and losses arising from changes in fair value is based on whether the derivative is designated as a hedging instrument and the nature of the hedged item. The Bank allocates certain derivatives as any of the following:

1. Fair value risk hedges for assets and liabilities recognized or confirmed commitments (fair value hedges).
2. Hedges of future cash flows risks expected to be substantially attributable to a recognized asset or liability, or attributable to a forecasted transaction (cash flows hedges).
3. Hedges of net investment in foreign operations (net investment hedges).

Hedge accounting is used for derivatives allocated for such purpose if they meet requirements eligible for accounting as hedge instruments.

At the inception of the transaction, the Bank documents the relationship between hedged items and hedging instruments as well as the objectives of risk management and strategy of entering into various hedge transactions. The Bank also documents, at the inception of the hedge and on an ongoing basis, the estimate of whether the derivatives used in hedge transactions are effective against the changes in the fair value or cash flows of the hedged item.

G/1 Fair value hedges

Changes in the fair value of derivatives that are designated and qualify as hedges of changes in fair value risks are recognized in the statement of profits and losses, together with any changes in the fair value that are attributable to the risk of hedged asset or liability.

The effective changes in fair value for interest rate swaps and relevant hedged items is retrospectively recognized in "net interest income" item. Whilst the effective changes in fair value for future currency contracts is recognized in "net income of financial investments at fair value through profits and losses" item.

Non-effective in all contracts and relevant hedged items included in the previous paragraph is recognized in "Net income of financial investments at fair value through profits and losses" item.

If the hedge no longer meets the criteria for hedge accounting, the adjustment to book value of a hedged item that is accounted for using the amortized cost method should be amortized by charging it to profit or loss over the period to maturity. Adjustments made to the book value of the hedged equity instrument are included within equity until they are disposed of.

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)

Notes to the Financial Statements - For the period ended 31 March 2020

G/2 Cash flow hedges

The effective portion of changes in the fair value of designated derivatives qualified for cash flow hedges are recognized in statement of other comprehensive income. Profits and losses related to non-effective portion are immediately recognized in "Net income of financial investments at fair value through profits and losses" item.

Amounts accumulated in statement of other comprehensive income are carried to statement of profits and losses in the same periods in which the hedged item has an impact on profit or loss. Profits or losses relating to the effective portion of the currency swaps and options are taken to the "net income of financial investments at fair value through profits and losses".

When a hedging instrument matures or is sold, or if hedging no longer meets the conditions for hedge accounting, profits or losses accumulated in other comprehensive income at that time is retained in other comprehensive income items and recognized in the statement of profits and losses when the forecasted transaction is finally recognized. When a forecast transaction is no longer expected to occur, profits or losses accumulated in other comprehensive income are immediately transferred to the statement of profits and losses.

G/3 Hedges of net investment

Profits or losses on the hedging instrument relating to the effective portion of the hedge are recognized in statement of other comprehensive income while any profits or losses relating to the ineffective portion are immediately recognized in the statement of profits and losses. On disposal of the foreign operation, the cumulative value of any such profits or losses recognized in the statement of other comprehensive income is carried to the statement of profits and losses.

G/4 Derivatives that do not qualify for hedge accounting

Changes in the fair value of derivative instruments that do not qualify for hedge accounting are recognized in the statement of profits and losses under "net income of financial investments at fair value through profits and losses". However, profits and losses arising from changes in the fair value of derivatives that are managed in conjunction with financial assets and liabilities at fair value through profits and losses are included in statement of profits and losses under 'Net income from financial instruments at fair value through profits and losses'.

H) Embedded derivatives

Embedded Derivatives are defined when derivatives are included with other contractual arrangement (original contract) and the bank accounts for embedded derivative as separate derivative when:

- The original contract is not originally fall within IFRS (9) Financial Instruments
- Measuring the original contract itself in a way other than fair value through profits and losses.
- The embedded derivative satisfies the conditions of defined derivatives if evaluated as a separate instrument.
- Economic characteristics and risks of the embedded derivatives differ from those properties and risks related to the original contract.

Embedded derivatives separated at fair value are measured at fair value and changes in fair value are recognized in profits and losses unless it is a part qualified for accounting as cash flow hedge or net investment. These separate embedded derivatives are presented within the statement of financial position together with the original contract.

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)

Notes to the Financial Statements - For the period ended 31 March 2020

I) Interest income and expenses

Interest income and expense for all interest-bearing financial instruments, except for those classified as held for trading or designated initially at fair value through profits and losses, are recognized in a statement within 'interest of similar loans and revenues' or "cost of similar deposits and costs" using the effective interest method.

The effective interest method is a method of calculating the amortized cost of a financial asset or a financial liability and of distributing the interest income or interest expense over the relevant instrument's life. The effective interest rate is the rate that exactly discounts future cash flows expected to be paid or received through the expected life of the financial instrument or, when appropriate, a shorter period to accurately determine the net carrying amount of the financial asset or financial liability. When calculating the effective interest rate, the Bank estimates cash flows considering all contractual terms of the financial instrument (for example, early payment options) but does not consider future credit losses. The calculation includes all fees paid or received between parties to the contract that are considered as part of the effective interest rate. Also, the transaction cost includes any premiums or discounts.

When loans or receivables are classified as non-performing or impaired as the case may be, the related interest income is not recognized but is rather carried off the financial statements in marginal records and is recognized under revenues according to cash basis as per the following:

- When they are collected, after receiving all past due instalments for consumption and real estate loans for personal housing and small loans for economic activities.
- For corporate loans, cash basis is also applied, where the interest subsequently calculated is given in accordance with the loan scheduling contract, until 25% of the scheduling instalments are repaid and with a minimum of one year of regular repayment. In case the customer continues to make payments on a regular basis, the interest calculated on the loan outstanding is recognized in revenues (interest on regular scheduling balance) without marginal interest before scheduling which is not recognized as revenues except after paying all the loan balance in the balance sheet before scheduling.

J) Fees and commission income

Fees that are due for a loan service or a facility are recognized as revenues when the service is rendered. Fees and commissions income related to non-performing or impaired loans or debts are suspended and are carried at off-balance sheet in marginal records and are recognized under revenues according to the cash basis when interest income is recognized in accordance with item (I). Fees that generally represent a complementing part of the financial asset effective rate are recognized as adjustment to the effective interest rate.

Commitment fees on loans are deferred when there is probability that loans will be used, as commitment fees the Bank receives represent compensation for the continuous interference to own the financial instrument. Subsequently, it is recognized as adjustment to the effective interest rate of the loan. If the commitment period passed without issuing the loan, commitment fees are recognized as income at the end of the commitment period.

Fees related to debt instruments measured at its fair value are recognized as income at initial recognition. Fees related to marketing of syndicated loans are recognized as income when the marketing process is completed and the loan is fully used or if the Bank kept its share of the syndicated loan using the effective interest rate as used by the other participants.

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)

Notes to the Financial Statements - For the period ended 31 March 2020

Fees and commissions arising from negotiation or participating in negotiation over a transaction in favour of another party -such as arrangement to buy shares or other financial instruments or acquire or sell entities, are recognized in statement of profits and losses upon completion of concerned transaction. Fees of management consultation and other services are usually recognized on a time-apportion basis over the period of performing the service. Financial planning and custody services fees provided on long periods are recognized over the period in which the service is provided.

K) Dividends income

Dividends are recognized in the statement of profits and losses when the right to receive those dividends is established.

L) Purchase and resale & Sale and Re-purchase agreements

Financial instruments sold according to Sale and Re-purchase agreements are presented in the assets in Treasury bills & other governmental instruments in the financial position. Difference between face value & purchase amount is recorded as interest realized over the contractual period using effective interest method.

M) Impairment of financial assets

- Impairment losses from expected credit loss of subsequent financial instruments that are not measured at fair value are recognized through profits and losses, which are:
 - 1) Financial assets represent debt instruments.
 - 2) Outstanding debts.
 - 3) Financial guarantee contracts.
 - 4) Commitments of loans and similar debt instruments.
- Impairment losses are not recognized in investments value of equity instruments.

Below is summary of main changes in accounting policies of our bank due to applying IFRS 9:

1. Expected credit losses

- Recognition and measurement of Expected Credit Loss Valuation

Financial assets are classified into three stages of credit rating as follows:

Staging	Stage 1	Stage 2	Stage 3
Characteristics	For a financial instruments to be classified as a Stage 1 instrument, the instrument must be compliant with the terms and conditions of the disbursement of the instruments, in	For a financial instrument to be classified a Stage 2 instrument, the instrument in question must experience a large increase in credit risk from the initial recognition or	For a financial instrument to be classified as a Stage 3 instrument, it must be consider credit impaired.

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)

Notes to the Financial Statements - For the period ended 31 March 2020

	addition to complying with the agreed upon payment schedule, and the absence of high risk.	disbursement of the instrument.	
Effect on the calculation of the Estimated Credit Loss	The Estimated Credit Loss for instruments classified as Stage 1 instruments are calculated over a 12 month period.	The Estimated Credit Loss for instruments classified as Stage 2 instruments are calculated over the lifetime of the financial instrument.	The Estimated Credit Loss for instruments classified as Stage 3 instruments are calculated over the lifetime of the financial instrument on the basis of the difference between the carrying value of the instrument & the present value of expected future cash flows.

▪ Significant Increase in Credit Risk

That requires the financial asset to be listed within Stage 2 and the expected credit loss to be calculated according to the methodology mentioned hereinafter

First: (Quantitative Factors):

○ (Backstop – Days of Past Dues)

Loans and facilities for corporates, SMEs and retail banking are listed within Stage 2, if the default period exceeds at least 60 days and is less than 90 days. Noting that this 60 days will reduce by (10) days annually to become 30 days within 3 years from implementation date.

○ Probability of Default (PD):

Upon increase of the PD over the remaining life of the financial asset since the date of the financial position, compared to the PD over the expected remaining life upon the initial recognition in accordance with the risk structure accepted by the Bank.

Second: (Qualitative Factors):

- Huge increase in interest rate due to increase in credit risks
- Significant adverse changes in the activity and financial or economic conditions in which the borrower operates
- Requesting scheduling as a result of difficulties facing the borrower
- Significant adverse changes in actual or expected operating results or cash flows.
- Future adverse economic changes affecting the borrower's future cash flows
- Early signs of cash flow/ liquidity problems such as delays in servicing creditors/ commercial loans.
- The cancellation of a direct facility by the bank due to the borrower's high credit risk.
- In addition to any other factors the bank deems fit when studying the case resulting in significant increase in credit risk.

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)

Notes to the Financial Statements - For the period ended 31 March 2020

▪ Definition of Default and Impairment

First: Quantitative criteria:

- If the borrower defaults more than 90 days to repay the contractual instalments, he is considered to be in default.
- If the Probability of Default results from valuation of credit worthiness degree proves default and impairment of financial asset.

Second: Qualitative criteria:

- The borrower's financial default.
- Non-compliance with financial obligations - the disappearance of the active market of the financial asset or financial instrument of the borrower due to financial difficulties.
- Granting lenders privileges related to the borrower's financial difficulty, which would not have been granted under normal circumstances.
- The borrower may be in bankruptcy or restructuring due to financial difficulties.
- Any other factors the bank thinks that it may result in default of impairment of financial asset as per the bank's internal policy.

▪ Transition between Credit Rating Stages:

First: Transition from Stage 2 to Stage 1

The financial asset should be transferred from Stage 2 to Stage 1 only after all the quantitative and qualitative elements of Stage 1 have been met and the full past due amounts of the financial asset and the returns have been paid.

Second: Transition from Stage 3 to Stage 2

Transfer of the financial asset from Stage 3 to Stage 2 shall not be made unless all the following conditions have been met:

- Fulfilling all quantitative and qualitative elements of Stage 2.
- Payment of 25% of financial asset outstanding balances after payment of due interest (marginalised/set aside)
- Regularity of payment for at least 12 months.

▪ Mechanism of Expected Credit Loss Calculation:

First: Regarding all financial assets except for retail:

○ Probability of Default (PD):

- For customers whose credit worthiness level are evaluated by using internal worthiness valuation of the bank, probability of default is calculated according to the used model considering the historical effective impact of probability of default related to our bank according to the client rating whether in portfolios of large, small and medium companies (PD Calibration)
- Regarding financial assets that are externally valued by external rating entities, the probability of default concerning international valuation entities is applied.

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)

Notes to the Financial Statements - For the period ended 31 March 2020

- **Loss Given Default (LGD):**
 - Loss Given Default (LGD) of large companies and corporates is calculated according to LGD developed by Moody's.
 - Regarding small and medium companies, LGD is calculated according to historical data of their default as well as historical collections and executions of our bank.
 - With regard to financial institutions and governmental debt instruments, LGD is calculated according to the Central Bank of Egypt's instructions.
- **Exposure At Default (EAD):**
 - Value at default equals current balance plus unused value of the authorized limits (cancellable and noncancellable) weighted with Credit Conversion Factor (CCF) according to Basel's instructions plus the amount of accrued interest as per the payment schedule and applicable interest rate.
- **The Impact of future looking for economic factors upon Probability of Default and Loss Given Default:**
 - Economic indicators issued by the international valuation corporation, Moody's, are applied
 - It is relied upon many economic indicators that have historical correspondence with default rates of geographical range in accordance with the indicators of the international valuation corporation, Moody's
 - Regarding the financial assets granted within the geographical range of Egypt, it is relied upon the economic indicators of trading volume in the Egyptian Stock Exchange as well as growth rate Gross Domestic Product (GDP) of Egypt.
 - Regarding other financial assets located outside the geographical range of Egypt, it is relied upon the economic indicators of these areas such as Arab Gulf, United States of America, United Kingdom and Europe.
 - Effect of such indicators on probability of default and Loss Given Default is calculated according to three different scenarios which are: normal, optimistic and reserved scenarios.
 - Weighted average of these scenarios is calculated on basis of 40% normal scenario, 30% optimistic scenario and 30% reserved scenario.

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)

Notes to the Financial Statements - For the period ended 31 March 2020

Second: Financial Assets of Retail Portfolio:

○ Probability of Default (PD):

Markov Chain mechanism is used. It includes the following:

- Historical conversion ratios of a group of customers from performing into non-performing and vice versa at the beginning of the period and comparing such ratios to the same group of customers at the end of the period.
- Annual conversion ratios of DPD Buckets for customers.
- The aforementioned conversion ratios will be used to make change average matrix for each year to establish an approach for expected changes according to the difference between annual changes average and the real matrix of portfolio named Credit Index. Accordingly, examine the effect of change by using regression model considering the national economic indicators expected upon future probability of default for each product.

○ Loss Given Default (LGD):

- Loss Given Default is calculated according to Discounted Cash Flow (DCF) approach based on the historical default data and by using Effective Interest Rate in DCF account and hence conducting adjustment for default ratios as per each product.

○ Exposure at default (EAD):

- The value of the current balance plus the unused value of the authorized limit (cancellable or non-cancellable) is weighted by the CCF conversion factor in accordance with the Basel instructions plus the Accrued Interest according to the repayment schedule and the applicable interest rate.
- In addition, the Bank calculates the provisions required for impairment of assets at risk of credit, including credit commitments, on the basis of percentages determined by the Central Bank of Egypt. If the provision for impairment losses required in accordance with the rules of the Central Bank of Egypt is required for the purpose of preparing the financial statements in accordance with the Egyptian Accounting Standards, the general bank risk reserve shall be deducted from equity in respect of retained earnings. This reserve is periodically adjusted to increase and decrease so that the amount of increase between the two allocations is always equal. This reserve is not available for distribution.

N) Fixed assets

They represent land and buildings related to head office, branches and offices, All fixed assets are reported at historical cost less depreciation and impairment losses, The historical cost includes all costs directly related to the acquisition of fixed assets items, Subsequent costs are included in the asset's carrying amount or are recognized as an asset, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the Bank and the cost of the item can be reliably measured, Maintenance and repair expenses are charged to other operating expenses during the financial Period in which they are incurred,

Land is not depreciated, Depreciation of other assets is calculated using the straight-line method to allocate their cost to until it reaches the residual values over their estimated useful lives, as follows:

Buildings	50 years
Furniture and safes	from 10 years to 40 years
Typewriters calculators and air conditions	8 years
Motor vehicles	5 years
Computers and core systems	5 years
Fixtures and fittings	5 years

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)

Notes to the Financial Statements - For the period ended 31 March 2020

The assets' residual values and useful lives are reviewed, and adjusted if appropriate, at each balance sheet date. Assets that are subject to depreciation are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount may not be recoverable. An asset's carrying amount is written down immediately to its recoverable amount if the asset's carrying amount is greater than its estimated recoverable amount.

The recoverable amount is the higher of the asset's fair value less costs to sell or value in use. Gains and losses on disposals are determined by comparing proceeds with asset carrying amount. These gain and (losses) are included in other operating income (expenses) in the income statement.

O) Intangible assets

O/1) Computer programs

Expenses related to computers development and maintenance realized in profits and losses statement. Expenses related directly to specified programs and under the bank's control and expected to generate from it economic benefit over its cost for more than one year is realized as an intangible asset. Direct cost includes employees cost in IT team and also appropriate share from general costs that's related to it.

Developing expenses that leads to the increase of computer programs performance exceed it is original performance is being realized, and adding it to the programs original cost. Realized computer programs is consumed through its productive life but it shouldn't exceed five years.

O/2- Other intangible assets

Intangible asset other than good will and computer programs (for example; brands, licenses and rental contract benefits).

Intangible assets is being recorded at its acquisition cost and being amortized by the straight line method or based on the expected future economic benefit over the expected life of the assets which have indefinite productive life are not amortized but the impairment cost is being tested annually and the charged in profits and losses statement.

P) Commitments and contracts of financial guarantees

- Financial guarantees represent contracts in which the bank is a guarantor or guarantor of funds or current accounts against other parties, and thus requires the bank to make certain payments to compensate the beneficiary from a loss incurred due to the failure of a debtor to pay when due in accordance with the terms of the loan. These financial guarantees are provided to banks, financial institutions and others on behalf of the bank's customers.

- Funding commitments are commitments by which the bank is obligated to grant credit in accordance with pre-defined conditions and thus includes unused portions of the credit limits granted within the amounts that the bank expects to use in the future. Initial recognition of contracts for financial guarantees and commitments to grant financing at interest rates below the market price in the financial statements at fair value at the date of granting the guarantee / commitment. Initially recognized fair value is amortized over the life of the guarantee / commitment.

- On subsequent measurement, the measurement of the bank's commitment under the guarantee / commitment is measured as follows:

As of January 1, 2019: the amortized cost or the amount of impairment losses, whichever is greater.

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)

Notes to the Financial Statements - For the period ended 31 March 2020

- Until December 31, 2018: On the basis of the amount of the first measurement, minus the consumption calculated to recognize the security fees in the statement of profits and losses in a straight-line manner over the life of the guarantee, or the best estimate of the payments required to settle any financial obligation resulting from the financial guarantee / correlation in the history of the financial position Which is higher. These estimates are determined on the basis of experience in similar transactions and historical losses, reinforced by the judgment of management.

During the year, the bank did not issue any commitments for funds that are measured at fair value through profit and loss.

For other commitments on funds:

Effective January 1, 2019: The bank recognizes expected credit losses.

The liabilities resulting from the contracts of financial guarantees are recognized in the provisions, and any increase in the liabilities resulting from the financial guarantee is recognized in other operating income (expenses) in the statement of profits and losses.

The calculated provisions for commitments for funds is recognized within the provision for loans for each individual loan to the extent that is equal to the value of the used from the loan. Any increase in the provision for commitments from financing over the value of the used is recognized in the provisions item in the statement of financial position.

Q) Investment properties

Investment properties represent land and buildings owned by the Bank and used to earn rental income or capital increase. Accordingly, investment properties do not include real estate assets through which the Bank carries out its business or which transferred to the bank to meet debts. The accounting policy for investment properties are the same as for fixed assets.

R) Leases

The accounting treatment for the finance lease is in accordance with law 95 of year 1995, if the contract entitles the lessee to purchase the asset at a specified date and amount, and the contract term is more than 75% of the asset expected useful life, or the present value of the total lease payments represents at least 90% of the value of the asset then this lease is considered finance lease. Other leases are considered operating lease.

R/1 leasing (lessee)

For lease, lease costs including maintenance expenses for leased assets are recognized in the statement of income in the Period incurred.

If the bank decides to exercise the right to purchase the leased assets, the cost of the right to purchase is capitalized as fixed asset which is depreciated over the useful life of the expected remaining life of the assets in the same method followed with similar assets.

R/2 leasing (lessor)

Assets leased as finance lease are recorded in the fixed assets in the balance sheet and depreciated over the asset expected useful life using the same method applicable to similar assets, The rent income is recognized based on the rate of return on the lease plus an amount equal to the cost of depreciation for the Year, The difference between the rental income recognized in the income statement and the total leasing contracts will be recognized in the balance sheet until the contract is terminated as it is deducted from the book value of the leasing asset.

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)

Notes to the Financial Statements - For the period ended 31 March 2020

To offset with a net book value of the leased asset, The maintenance expenses and insurance expenses will be recognized in the income statement when incurred to the extent they are not charged to the tenant, And when there is objective evidence that the Bank will not be able to collect all balances of the financial lease debtors, they are to be reduced to their recoverable amount.

Operating lease assets are recorded in the fixed assets in the balance sheet and depreciated over the asset expected useful life using the same method applicable to similar assets, The lease rent income less any discounts granted to the lessee will be recognized in the income statement using the straight line method over the contract term.

S) Cash and cash equivalents

For the purposes of the cash flows statement, cash and cash equivalents include balances due within three months from the date of acquisition. It also includes, cash and balances due from the Central Bank of Egypt other than the mandatory reserve, and current accounts with banks and treasury bills and other governmental securities.

T) Other provisions

Provisions for restructuring costs and legal claims are recognized when the Bank has a present legal or constructive obligation as a result of past events; it is more likely than not that an outflow of resources will be required to settle the obligation and the amount has been reliably estimated.

If there are a number of similar obligations, the likelihood that an outflow is required to settle an obligation is determined taking into consideration the group of obligations as a whole, A provision is recognized even if the likelihood of an outflow with respect to any obligation in the group is minimal, Reversal of Provisions no longer required totally or partially are presented in other operating income (expense).

Provisions are measured at the present value of the expected required expenditures to settle obligations after one year from financial statement date using the appropriate rate in accordance with the terms of settlement ignoring the tax effect which reflects the time value of money, If the settlement term is less than one year, provisions will be measured by the contractual value if there is no material variance, Otherwise, it will be measured at the present value.

U) Employees benefits

Social Insurance

The bank is committed to pay the subscriptions to the Social Insurance Authority and there are no additional liabilities on the bank when paying such subscription, these periodical subscriptions will be charged to the income statement in the period it is recognized, and to be included in employees benefits.

Employees Profit share

The bank pays a percentage of the cash dividends declared as profit sharing to employees, The employees' share is recognized as a dividend distribution through equity and as a liability when approved by the Bank's shareholders general assembly meeting, No liability is recognized for profit sharing relating to undistributed profit to employees.

Collective employee insurance policy

The Bank and employees pay contribution to the collective insurance policy as a percentage of the employees' wages on a monthly basis, Once the contributions have been paid, the bank has no further payment obligations, The subscriptions are recognized as expenses on employees' benefits until it is

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)

Notes to the Financial Statements - For the period ended 31 March 2020

redeemed, The contribution paid in advance are recognized within the assets to the extent that it reduces the future payments or cash refund.

Other Retirement benefit obligations

The bank offers health care for retired people after end of service and usually this benefit is earned when the employee works till retirement age and completes the minimum time of service period, and this expected benefit is earned during the employment period by using an accounting method same as the one used in specific benefits process.

V) Income tax

The income tax of the year on the profit or loss includes current tax and deferred tax and is recognized in the income statement except for income tax relating to items of owners' equity which are recognized directly in other comprehensive income.

The income taxes recognized on the basis of net taxable profit using the tax rates enacted at the date of the Balance Sheet in addition to the tax adjustments related to previous years, and commitments in accordance with the principles of accounting and its value according to the tax regulations, The value of deferred tax is recognized based on the expected manner of realization or settlement of the values of the asset values and liabilities, using tax rates enacted at the date of the balance sheet.

The deferred tax assets of the Bank are recognized when it is probable that future taxable profit will be available against which the temporary difference can be utilized, Deferred tax assets are reduced to the extent that it is no longer probable that sufficient taxable profits will be available to allow all or part of the asset to be recovered, Reversal is subsequently permitted when there is a probable from its economic benefit limited to the extent reduced previously.

W) Borrowing

Loans obtained by the Bank are initially recognized at fair value less the cost of obtaining the loan, the loan is measured subsequently at amortized cost, and the difference between net proceeds and the value that will be paid are charged in the income statement over the loan period using the effective interest method.

X) Capital

X/1 Capital cost

Issuance costs directly related to issuing new shares or issuing shares related to acquisition or share options are charged to share holders' equity of total proceeds net of tax.

X/2 Dividends

Dividends are recognized when declared by the Shareholders' General Assembly, Those dividends include employees' share in the profits and the Board of Directors' remuneration as prescribed by the articles of association and law.

Bank's net profits are distributed annually after deducting all general expenses and other costs as follows:

- 1) Deducting an amount equivalent to 5% of the profits to form the legal reserve until the total reserve amount is equivalent to 100% of paid-up capital, and when lack of reserves the deduction returns.

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)

Notes to the Financial Statements - For the period ended 31 March 2020

- 2) And then, deduct the amount required for distributing the first share of profits of 5% paid to shareholders based on the value of their shares if that did not allow the profit for one of the years, The distribution of this share is not permissible to claim the profits from the years following.
- 3) Then, 10% of the profits are allocated to the staff and workers in the bank, and are distributed according to the rules proposed by the Board of Directors and adopted by the General Assembly which should not exceed the sum of annual wages of workers in the bank.
- 4) After the above, a rate which does not exceed 10% of the remaining profit is allocated as a remuneration for the Board of Directors.
- 5) The remaining profit is distributed to shareholders as an additional share from profits or transferred to the following year based on the Board of Directors approval.

Y) Custodial activities

The bank performs custodial activities that results in custody or management of assets on behalf of individuals, trusts, and retirement benefit plans, these assets and the related income are excluded from the bank's Financial Statements, since these assets are not owned by the bank.

Z) Comparative figures

The comparative figures shall be re-classified, when necessary to be in conformity with the changes in the presentation adopted in the current period.

2. Financial risk management

The Bank's activities expose it to a variety of financial risks. Taking risk is core to the financial business. The Bank's processes involve the analysis, evaluation and management of some degree of risk or combination of risks. The Bank's aim is, therefore, to achieve an appropriate balance between risk and return and minimize potential adverse effects on the Bank's financial performance. The most significant types of risks are credit risk, market risk, liquidity risk and other operating risks. Market risk comprises foreign exchange risks, interest rate risk and other price risks.

The risk management policies and strategies are designed to identify and analyse these risks, monitor the risks and comply with appropriate risk limits using reliable techniques as well as updated information systems. The Bank regularly reviews its risk management policies and systems and modify them to reflect changes in markets, products and services and the best modern applications.

Risk management is conducted through the Department of Risk Management in view of the policies approved by the Board of Directors. The Department of Risk Management identifies and evaluates financial risks in close collaboration with the various operational units of the Bank. The Board provides written principles for risk management as a whole, in addition to written policies covering specific risk areas such as credit risk, foreign currency exchange risk, risk of interest rates and the use of derivative and non-derivative financial instruments. In addition, the Department of Risk Management is responsible for the periodic review of risk management and the control environment independently.

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)

Notes to the Financial Statements - For the period ended 31 March 2020

A) Credit risk

The bank is exposed to credit risk, which is the risk resulting from failure of one party to meet its contractual obligations, Credit risk is considered the most significant risk for the bank therefore the management is conservative in managing this risk, Credit risks results mainly from lending and investments activities which represents the bank's assets, contain debt instruments, Credit risk is also included in off balance sheet financial instruments, such as loan commitments, Managing and monitoring process of credit risk is centralized in credit risk team management in risk management department who prepare reports to the Board of Directors and Head of operating units on regular basis.

A / 1 Credit risk measurement

Loans and facilities to Banks and customers (including commitments and financial guarantees).

To measure credit risk on the loans and facilities to banks and customers, the Bank considers the following three components:

- * Probability of default by the client or third parties to fulfill its contractual obligations.
- * The current position and its future development from which the bank conclude the balance exposed to risk (Exposure at default).

The bank's management daily activities involves measuring the credit risk that reflects the expected loss based on the Expected Loss Model required by the Basel Committee on Banking Supervision, Those operational measures could be inconsistent with the impairment loss according to EAS 26, which adopts the realized losses model and not the expected losses (Note A / 3).

The Bank evaluates the default risk for each customer using internal evaluation techniques to determine the rating for the different customers' categories, these techniques were developed taking into consideration statistical analysis and the professional judgment of the credit officers to reach the appropriate rating, and the customers are classified into four ratings.

Rating scale (shown in the following table) reflects the possibility of defaults for each rating category, in which the credit positions may transfer from one rating to other depending on the change in the degree of default risk, The customer's rating and the rating process are reviewed and improved when necessary, The Bank periodically evaluates the performance of the credit rating methods and their ability in expecting the customers' defaults.

Bank's internal ratings scale	Rating
Performing loans	1
Regular follow up	2
Watch list	3
Non-performing loans	4

General banking risk measurement model:

- The Bank calculates the provisions required to meet the impairment of assets at risk, including commitments relating to credit, on the basis of ratios determined by the Central Bank of Egypt. In the case of the increase in the provision for impairment required in accordance with the creditworthiness rules of the Central Bank of Egypt over the required provision using the expected credit losses. The excess of the provision is provided as a general bank risk reserve in equity deducted from retained earnings by that amount.

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)

Notes to the Financial Statements - For the period ended 31 March 2020

- The following are the categories of credit ratings for the institutions in accordance with the four internal rating grades compared to the bases of the Central Bank of Egypt assessment and provisions percentage required for the impairment of assets exposed to credit risk:

Internal Ratings Granting	Internal Ratings	Provision percentage required for retail	Provision percentage required for corporate	Rating indications	CBE Ratings
Performing loans	1	Zero	Zero	Low risk	1
Performing loans	1	1 %	1 %	Moderate risk	2
Performing loans	1	3 %	1 %	Satisfactory risk	3
Performing loans	1	3 %	2 %	Appropriate risk	4
Performing loans	1	3 %	2 %	Acceptable risk	5
Regular watching	2	3 %	3 %	Marginally	6
				Acceptable risk	
Watch list	3	3 %	5 %	Risks that need special care	7
Non-performing loans	4	20 %	20 %	Below the level	8
Non-performing loans	4	50 %	50 %	Doubtful	9
Non-performing loans	4	100 %	100 %	Bad debt	10

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)

Notes to the Financial Statements - For the period ended 31 March 2020

Summary of the results of the calculation of expected credit losses on the status of March 2020:

Second: Expected credit loss according to Credit Rating Stages of IFRS 9 in accordance with items exposed to risk

Items exposed to credit risk		Credit rating stages in accordance with IFRS 9			Total
		Stage 1	Stage 2	Stage 3	
Retail customers	Value at risk	5,206,223	859,428	42,174	6,107,825

	Net carrying value	55,621,583	8,355,006	183,714	64,160,303

The spread of the COVID-19 pandemic at the beginning of 2020 led to negative repercussions that cast a shadow on the global economy. This has also impacted both the Egyptian economy in general and the Egyptian banking sector in particular. Due to the spread of the virus, the bank implemented a number of precautionary measures that would aid in protecting the health & safety of both the employees of our bank, in addition to all customers visiting any NBK Branches as well as the NBK Headquarters. Additionally, a number of measures have been taken with the aim of protecting the financial position of the bank and ensure the adequate allocation of provision to protect the bank from any possible negative repercussions that may occur to clients in the bank's credit portfolio due to the negative shock that resulted from the spread of COVID-19 and the consequent decrease in business indicators for some economic sectors. The following is a brief outline of the most important measures taken in this regard;

1. The most important precautionary measures to prevent the spread of the epidemic within our bank are as follows:
 - a. Activating the bank's business continuity plan in addition to the regular meetings held by Crisis Management Committee in order to discuss developments in the current situation and take the necessary decisions to manage the crisis within the bank.
 - b. The number of employees in the Head Office and the branches have been reduced, with a number of employees transferred to emergency backup offices, in addition to a number of employees being assigned to work from home to ensure their health and safety.
 - c. Disinfectants and sanitizer dispensers have been installed throughout in the bank's headquarters, in addition to the coordination with the sanitation company contracted with the bank to ensure continuous sterilization and disinfection of all the various offices within the headquarters and branches.
 - d. Enforcement of the mandatory wearing of medical masks in the headquarters of our bank,
 - e. Temperature checks of all employees at the bank headquarters upon arrival and periodically throughout the day,
 - f. The suspension of all social activities and trips organized by our bank for employees
 - g. The suspension of all forms of trainings and courses held either internally or externally.

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)

Notes to the Financial Statements - For the period ended 31 March 2020

2. The most important measures taken in the implementation of the directives and initiatives set by the Central Bank of Egypt with the purpose of supporting the Egyptian economy in the current situation are as follows:
 - a. All principle and interest repayment due after the 15/03/2020 have been postponed for 6 months, except for the clients who wish to pay their obligation according to their existing repayment schedules without incurring any late payment or interest fees,
 - b. Enforcing the maximum limits for cash deposits and withdrawals according to instructions circulated by the Central Bank of Egypt,
 - c. Exemptions of any cash transfer fees.
 - d. Encouraging customers to use alternative channels provided by the bank, such as Internet & Mobile Banking or the use of the banks' mobile applications, to meet their needs and avoid the need for the visitation of the bank's branches or headquarter.
 - e. Reduction of the interest rates for the sectors that enjoy the various initiative programs rolled out by the Central Bank of Egypt to 8% to protect these sectors from the negative economic shocks that are a result of the COVID19 pandemic. These sectors include; Tourism, Manufacturing, Real Estate, Mortgages, & Contracting.
3. The most important measure that has been taken is the analysis of the repercussions of the COVID19 pandemic on all the clients within the banks' credit portfolio, in order to ensure that the necessary provisions have been allocated to protect the bank from any defaults or delayed payments that may occur as a result of the crisis. This analysis included the following;
 - a. The bank applies the International Financial Reporting Standards (IFRS 9) when calculating provisions in accordance with the instructions of the Central Bank of Egypt, starting in 2019,
 - b. The calculation of the banks provision involved the historical default rates, and all subsequent recoveries from defaulted customers in addition to forecasted economic indicators for the Egyptian economy and its' impact on the probability of default (PD) and the loss given default (LGD), which are used in the calculation of the Expected Credit Loss (ECL),
 - c. The forecasted macroeconomic indicators are issued by Moody's Analytics, which have been stressed by the COVID19 crisis, which resulted in the deterioration of the future economic outlook of the Egyptian economy, in addition to the increased probability of default of numerous sectors within the local & global economy deemed to be most at risk of the COVID19 pandemic,
 - d. In light of all the issues outlined previously, an independent analysis was carried out by the bank to analyze how the COVID-19 pandemic would impact Egypt's various economic sectors, using sources and studies published by several credit rating agencies and the International Monetary Fund (IMF) in addition to analysis conducted by credit risk analysts at the bank,
 - e. In light of the studies conducted, all the various sectors within the Egyptian have been classified into the following categories;
 - i. High Risk Sectors; These are the sectors that have been deemed to be the most vulnerable to the COVID-19 pandemic, as their future outlook are deemed to be negative in the short term, examples include the tourism sector, the aviation sector, the automotive sector, and stock portfolios.
 - ii. Medium Risk Sector: these are medium risk sectors, where the COVID-19 pandemic is expected to have a slightly more limited impact on their future economic outlook, and these sectors include; Contractors, Infrastructure, Energy, & Petrochemicals.
 - iii. Low Risk Sectors; these are relatively low risk sectors; where the COVID-19 is expected to have very little impact on the future economic outlook of these industries, with some even experiencing an improved economic outlook as a result of the pandemic, and these sectors include; the health sector, pharmaceutical sector, the food & beverage sectors.
 - f. Additionally, each client in the bank's credit portfolio were categorized into 3 subcategories according to a model developed that takes into account a respective clients credit worthiness, the type of facilities granted, whether the customer is a net importer or exporter, in addition to an assessment of the risks a respective client is expected to face due the COVID-19 pandemic. The subcategories are as follows;

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)

Notes to the Financial Statements - For the period ended 31 March 2020

- i. Class A: this category consists of clients whose solvency is proportionate to the size of facilities disbursed by the bank, and the current crisis is not expected to impact these clients ability to repay their obligations given the nature of the facilities granted.
 - ii. Class B: this category consists of clients who have a higher level of risk, and hence are expected to be impacted by the current crisis. However, the impact of the current crisis on the customers' ability to repay all obligations is expected to be limited.
 - iii. Class C: this category consists of clients who are considered very high risk and their ability to repay all obligations is expected to be severely hindered by the current crisis.
- g. The result of the analysis conducted by the bank was to the establishment of a risk matrix that was used to assess the status of all clients in the bank's credit portfolio, in addition to taking the necessary precautionary measures to ensure that sufficient monitoring is takes place for all clients in line with the expected risk levels, in addition to ensuring that adequate provisions have been accumulated for all clients categorized in the high risk categories & subcategories. The matrix developed is as follows;

Risk Level	Class A	Class B	Class C
Low Risk Sectors	Periodic monitoring of existing clients, and increasing granted facilities in this category & subcategories should the opportunity arise		Close monitoring of the clients will take place, and as the impact of the crisis becomes clearer, the clients will be reevaluated.
Medium Risk Sectors	Close monitoring of the clients will take place, and as the impact of the crisis becomes clearer, the client will be reevaluated.		
High Risk Sectors	All client operating in high risk sectors are automatically considered as Stage 2 clients, and the provisions are calculated according to the lifetime of all granted facilities.		

- h. Additionally, all clients operating in the iron, cement or ceramic sectors have been automatically assigned 5% ORR provision, which will be gradually increased to 20% by March 31st 2021, according to instructions set by the Central Bank of Egypt.
4. Clarifications on the allocation of provision balances;
- a. The total Expected Credit Loss calculated using the banks ECL model for all funded facilities granted by the bank on the 31st of December 2019 amounted to EGP 647 Mn, in addition to further provisions accumulated by the bank amounting to EGP 162.5 Mn, which consist of the following;

Purpose of Allocation	Additional Provision
Additional provision required for Model Risk Assessment	EGP 118.7 Mn
Additional provision required for the DCF haircuts	EGP 33.9 Mn
Other Additional Provisions	EGP 9.9 Mn
Total	EGP 162.5 Mn

Subsequently, all the additional provisions allocated due to the risks outlined above have been mitigated during the first quarter of 2020, and hence they have been reallocated to cover the required provision balance calculated on the 31st of March 2020, and the rationale behind these allocations of the extra provision balance on the 31st of December 2019 are as follows;

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)

Notes to the Financial Statements - For the period ended 31 March 2020

- After the finalization of the internal review of the models and methodologies used in the calculation of the Expected Credit Loss (ECL), it was concluded that the all the models, methodologies and assumptions used by the bank are in line with the banks historical data, and are also in line with both IFRS 9 standards and Central Bank of Egypt rules and regulations. This therefore reduces any risk associated with the models used by the banks, hence allowing the bank to reallocate the accumulated provisions to other uses.
- The provisions allocated for the future discounted cash flows from defaulted customers was allocated in the case of failure to receive the future expected cash flows from these clients. However, starting from Q1-2020 the discounting future cash flows were excluded from the calculation of the banks provisions, hence rendering the accumulated provisions redundant. Therefore the provision balances were released for use in other purposes.
- The Expected Credit Loss (ECL) for all funded facilities disbursed by the bank amounted to EGP 779.5 Mn as of 31st of March 2020, increasing by EGP 132.5 Mn from the previous quarter (20.5% increase Q-o-Q.) This noticeable increase is due to the increased probability of default (PD), loss given default (LGD), and the downgrading of clients to stage 2 as a result of the COVID-19 pandemic.
- The Expected Credit Loss (ECL) for all unfunded facilities disbursed by the bank as of the 31st of March 2020 amounted to EGP 194 Mn compared to EGP 144 Mn recorded on the 31st of December 2019. The increase of EGP 50 Mn is also due to the increased probability of default (PD), loss given default (LGD), and the downgrading of clients to stage 2 as a result of the COVID-19 pandemic.

Third: Loans and facilities

A. Impairment of non-financial assets

Assets that do not have definite life time -except for goodwill- are not depreciated and its impairment is reviewed annually. Impairment of depreciated assets has to be examined when there are events or changes in circumstances indicate that the book value may be non-recoverable.

Impairment loss is recognized and the asset value is deducted at the amount by which the asset's book value increases over the recoverable amount. The recoverable amount represents the higher of the asset's net selling amount and value in use. For the purpose of estimating the impairment, the asset is grouped with the smallest cash generating unit. At each financial statement preparation date, non-financial assets with impairment have to be reviewed to determine if there is impairment reversal made to the statement of profits and losses.

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)

Notes to the financial statements - For the period ended 31 March 2020

- The position exposed to impairment depends on the amounts that the bank expects to be outstanding at the time of the default, for example, for the loan, this position is the nominal value, and for the commitments, the bank lists all the amounts actually withdrawn in addition to the other amounts that are expected to have been withdrawn Until the date of default, if it occurred.
- The estimated default or acute loss represents the bank's expectation of the extent of the loss when claiming the loan if the default occurs, and this is expressed in terms of the loss of the loan and certainly this varies according to the type of debtor, the priority of the claim, the availability of guarantees or other credit coverage.

- **Debt instruments issued from Egyptian Government & Central bank of Egypt**

Debt instruments, treasury bills and other bills

- As for debt instruments and bills, the Bank uses external ratings such as Standard & Poor's or equivalent for credit risk management. If these are not available, techniques similar to those applied to the credit customers are used. Investments in securities and bills are considered a method to obtain a better credit quality. Such investments also provide an available source to meet the funding requirements.

A/2 Policies of limiting and preventing risks

The Bank manages, limits and controls concentrations of credit risk at the level of debtor, groups industries and countries.

The Bank structures the levels of credit risk it accepts by placing limits on the extent of risk accepted in relation to one borrower, groups of borrowers, and economic activities and geographical segments. Such risks are monitored on a revolving basis and subject to an annual or more frequent review, if required. The limits of credit risk at the level of borrower/ group, producer, sector and country are periodically approved by Risk Committee and Credit Committee of the Board. A summary of these meetings shall be presented to the Board.

Limits of credit to any borrower, including banks, are divided into sub limits that include the amount on and off-the balance sheet, and the daily risk limit related to trading items such as forward foreign exchange contracts. Actual amounts against limits are compared daily.

Exposure to credit risk is also managed through regular analysis of the existing and potential borrowers' ability to meet their obligations and through changing the lending limits where appropriate. Below are some ways to reduce the risk:

Collaterals

- The Bank develops several policies and measures to minimise the credit risk. One of these methods is to obtain collateral in exchange for funds provided. The Bank develops guidelines for specific categories of acceptable collateral. The main types of collaterals for loans and facilities are as follows:
 - Real estate mortgage.
 - Activity assets mortgage.
 - Financial instruments mortgage, such as debt and equity instruments.

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)

Notes to the financial statements - For the period ended 31 March 2020

- Long-term finance and lending to corporate entities are generally secured, while retail credit facilities are unsecured. To minimise the credit loss, the Bank seeks additional collaterals from the relevant parties as soon as impairment indicators are identified for the relevant loans or facilities.
- The Bank determines the collaterals held to secure assets other than loans and facilities according to the nature of the instrument. Generally, debt instruments are unsecured except for asset-backed securities and similar instruments that are secured by a financial instruments portfolio.

Derivatives

- The Bank maintains strict control procedures over net value of opened derivative positions, i.e. the difference between purchase and sale contracts at both the value and duration levels. In all cases, the amount subject to credit risk is limited to the current fair value of instruments in from which the Bank could gain benefits, i.e. assets that have positive fair value which represent a small value of the contractual amount or the notional value used to express outstanding instruments. The Bank manages this credit risk, which is considered part of the total lending limit granted to customers with expected market changes risk all together. Generally, no collateral is obtained for credit risk related to these instruments, except for marginal deposits required by the Bank from other parties.
- Settlement risk arises when cash, equity instruments or other securities are used in the settlement process or if there is expectation to receive cash, equity instruments or other securities. Daily settlement limits are established for other parties to cover the aggregate settlement risk arising from the daily transactions of the Bank.

Credit related commitments

- The main purpose of the credit related commitments is to ensure that funds are available to the customer upon request. Guarantees and standby letters of credit bear credit risk related to loans. Documentary and commercial letters of credit issued by the Bank on behalf of the customer to give a third party the right of withdrawal from the Bank within the limits of certain amounts and other specific conditions are often secured with the goods shipped and therefore carry a lesser degree of direct loan risks.
- Credit-related commitments represent the unused portion of credit limit authorised to grant loans, guarantees or letters of credit. The Bank is exposed to a possible loss of an amount that equals the total unused commitments as for the credit risk resulting from credit-related commitments. However, the probable amount of loss is less than the unused commitments as most commitments related to granting credit represent contingent liabilities to customers maintaining certain credit standards. The Bank monitors the maturity term of the credit commitments because long-term commitments are of a higher credit risk than short-term commitments.

A/3 Impairment and provisioning policies

- The internal rating systems described in (Note A/1) focus more on credit quality planning from the beginning of lending and investment activities. Otherwise, impairment losses that occurred at the balance sheet date only are recognized for financial reports purposes based on objective evidence indicating impairment according to what will be mentioned in this note. Due to the different methodologies applied, the amounts of incurred credit losses charged to the financial statements are usually lower than the loss amount determined using the expected loss model used in preparing the financial statements. For the purposes of the Central Bank of Egypt's rules, impairment losses

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)
Notes to the financial statements - For the period ended 31 March 2020

provision included in the balance sheet at the end of the period is derived from the four internal rating grades. However, the majority of the provision comes from the last two ratings.

- The table below shows the percentage of on-financial position items related to loans and facilities, and the relevant impairment for each internal rating category of the bank noting that written off during the year amounted L.E 26,236 K against L.E 599,985 in the comparative year.

Bank's rating in 31 March 2020

	31 March 2020		31 December 2019	
	Loans & facilities %	Impairment provision %	Loans & facilities %	Impairment provision %
Stage 1	76.49%	19.53%	83.20%	36.55%
Stage 2	21.65%	13.39%	14.66%	7.71%
Stage 3	1.86%	67.08%	2.14%	55.74%
	100 %	100 %	100 %	100 %

- Internal rating tools help management to determine whether there is objective evidence to indicate the existence of impairment based on the following indicators identified by the Bank:
 - Significant financial difficulty of the borrower or obligor.
 - Breach of the loan agreement conditions such as default.
 - Expected bankruptcy of the borrower, entering a liquidation lawsuit, or restructuring the finance granted to the borrower.
 - Deterioration of the competitive position of the borrower.
 - Granting privileges or assignments by the Bank to the borrower due to economic or legal reasons related to the financial difficulties of the borrower, which are not granted by the Bank in the normal course of business.
 - Impairment of the guarantee.
 - Deterioration of creditworthiness.
- The Bank's policies require reviewing all financial assets that exceed specific materiality at least once a year or more, when required. The impairment loss is determined for accounts evaluated on an individual basis by determining case-by-case actual losses at the balance sheet date. These policies are applied on all accounts, which have specific materiality on an individual basis. The valuation usually includes the existing collateral, the related enforcements on these collaterals and the expected collections from those accounts.
- Impairment loss provision is formed based on a group of similar assets using the historical experience available, personal judgement and statistical methods.

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)

Notes to the financial statements - For the period ended 31 March 2020

B) Market risk

The Bank is exposed to market risk, which is the risk of fair value or future cash flow fluctuations from changes in market price. Market risks arise from open market related to interest rate, currency where each is exposed to general and specific market movements and changes in sensitivity levels of market rates or prices, such as interest rates and foreign exchange rates. The Bank divides its exposure to market risk into trading and non-trading portfolios.

Management of market risks arising from trading or non-trading activities focuses on risk management in the Bank which is monitored by two separate teams. Regular reports about market risk are submitted to the Risk Committee of the Board of Directors and each business unit head periodically.

Portfolios of financial investments at fair value through profits and losses include positions resulting from the bank dealing directly with customers or with the market, while non-trading portfolios primarily arise from managing assets and liabilities interest price. Such portfolios include foreign exchange risk and equity instruments risks arising from financial investments at amortized cost and financial investments at fair value through other comprehensive income.

B/ 1 Market risk measurement techniques

- As part of market risk management, the Bank undertakes various hedging strategies. The Bank also enters into swaps to match the interest rate risk associated with the debt instruments and fixed-rate long-term loans if the fair value option has been applied. The major measurement techniques used to control market risk are outlined below:

Value at risk

- The Bank applies a 'value at risk' methodology (VAR) for trading and non-trading portfolios to estimate the market risk on positions held and the maximum expected losses based on a number of assumptions for various changes in market conditions. The Board sets separate limits for the value of risk that may be accepted by the Bank for trading and non-trading portfolios and are monitored daily by the Bank's risk management.
- VAR is a statistical estimation of the expected losses on the current portfolio resulting from adverse market movements, which represent the maximum amount the Bank expects to lose using a confidence level of (99%). Therefore, there is a statistical probability of (1%) that actual losses could be greater than the VAR estimation. The VAR model assumes that the holding period is ten days before closing the open positions. It also assumes that market movements during the holding period will be similar to the movement pattern which occurred during the previous ten days. The bank shall assess the previous movement based on information regarding two previous years and by using Decay Rate 99. The Bank applies these historical changes in rates, prices, indicators, etc., directly to its current positions. This approach is called historical simulation. Actual outcomes are monitored regularly to test the validity of the assumptions and factors used in the VAR calculation.
- The use of this approach does not prevent losses from exceeding these limits if there are significant market movements.
- As VAR is considered a primary part of the Bank's market risk control technique, VAR limits are established by the Board of Directors annually. Actual VAR are compared to the limits set by the Bank and reviewed weekly by the Bank's risk management.

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)
Notes to the financial statements - For the period ended 31 March 2020

Stress testing

- Stress testing provides an indicator of the expected losses that may arise from sharp adverse circumstances. Stress testing is designed to match the business using standard analysis for specific scenarios. The stress testing carried out by the Bank Risk Management includes risk factors stress testing where a set of sharp movements are applied to each risk category. The results of stress testing are reviewed by Senior Management and Board of Directors and a summary of the Risks Committee meetings is submitted to the Board of Directors.

B/2 Foreign exchange volatility risk

- The Bank is exposed to the effects of volatility in the prevailing foreign currency exchange rates on its financial position and cash flows. The Board of Directors sets limits for foreign exchange with the aggregate value for each position at the end of the day as well as during the day. The following table summarizes the Bank's exposure to foreign exchange volatility risk at the end of financial period. The following table includes the carrying amounts of the financial instruments in their currencies:

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)

Notes to the Financial Statements - For the period ended 31 March 2020

B /3 Interest rate risk

- The Bank is exposed to the effects of fluctuations in the interest rates prevailing in the market, which is the risk of cash flows of the interest rate represented in fluctuation of future cash flows for a financial instrument due to changes in the interest rate of the instrument. Fair value interest rate risk is the risk that the value of a financial instrument will fluctuate because of changes in market interest rates. The interest margin may increase due to these changes; however, revenues may decrease in case unexpected movements arise. The ACLQ Committee sets limits on the level of mismatch of interest rate repricing that the Bank may maintain, which is monitored daily by the Bank's risk management.
- The table below summarises the Bank's exposure to interest rate volatility risk. It includes the financial instruments' carrying amounts categorized by the earlier repricing or maturity dates:

	Up to 1 month	1-3 Months	3-12 Months	1-5 years	Over 5 years	Without return	Total

Notes to the financial statements - For the period ended 31 March 2020

C) Liquidity risk

Liquidity risk represents difficulty encountering the Bank in meeting its financial commitments when they fall due and replace funds when they are withdrawn. This may result in failure of the settlement of the bank's obligations to repay the depositors and fulfil lending commitments.

Liquidity Risk Management System

Risks are identified and measured by the Treasury Department while the risks are assessed and corrective actions are determined by the (ALCO) under the chairmanship of the Managing Director, the membership of the Executive Directors, the Chief Financial Officer and the Head of Treasury (Secretary of the Committee).

The necessary procedures determined by the Asset and Liability Management Committee to correct gaps are implemented by the Treasury Department and/or business segments. Reports on the situation progress are submitted to the Treasury Department as well as to the Asset and Liability Management Committee.

Function of the Assets and Liabilities Committee:

- Review, verify and approve scenarios and assumptions used to identify and measure liquidity risk.
- Review reports issued by the Treasury Department on the liquidity structure gap.
- Evaluate, amend and approve any recommendations to amend the financing strategy or financial position structure.

Function of the Treasury management

- Documenting and maintaining a risk reduction policy as approved by the Asset Liability Management Committee.
- Preparation of models used to identify and measure risks and work to develop them constantly.
- Prepare reports on values exposed to risk, develop these values over time, and present them to the Asset and Liability Management Committee.
- Follow up the implementation of the decisions of the Assets and Liabilities Committee and notify it of the progress in the implementation thereof.
- Coordinate with multiple lines of work to meet funding needs and report on the potential impact on the liquidity gap.
- Test and advise on the potential impact of the introduction of any new product on liquidity structure positions.
- Responsibility for managing liquidity in the short term.
- Prepare periodic reports on any market developments and to consider any bottleneck in liquidity.
- Implement the approved recommendations of the Asset and Liabilities Management Committee. Submit reports on progress regarding implementation of such recommendations.
- Inform the Treasury Department of funding needs to address the liquidity gap.

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)
Notes to the financial statements - For the period ended 31 March 2020

The Bank's Objective from Liquidity Management

The Bank aims to finance its activities based on the best possible prices under normal conditions and to ensure that it can meet its obligations in the event of a crisis occurs. To this end, the Bank adopts the following key principles of liquidity management:

- Liquidity management in the short term according to the regulatory framework.
- Diversifying sources of funding.
- Maintaining a group of assets with high liquidity.

Measurement and Follow-up of Liquidity Risks

The Bank's liquidity management framework consists of the following operations:

- Regular assessment of the Bank's liquidity structure and its development over time.
- Follow-up diversification of sources of funding.
- The Bank's assessment of the funding needs based on the projections in the estimated budget for planning suitable financing solutions.

The expected liquidity gaps are determined by listing the items appearing on the statement of financial position of the Bank and by the type of currency and maturities remaining for those items.

The maturity dates of assets and liabilities are determined based on the contractual terms of the transactions and models of the customer's historical behavior as in the case of savings accounts as well as the traditional assumptions related to certain items in the statement of financial position (as in the case of equity).

Funding Approach

Sources of liquidity are reviewed by the Asset and Liabilities Committee of the Bank to provide a wide diversity in the currency, resources, products and maturities.

Cash flows underived

The table below presents the cash flows payable by the Bank under non-derivative financial liabilities on the basis of remaining contractual maturities at the date of balance sheet.

(E) Capital management

First: The Bank's objectives behind managing capital include elements other than equity shown in the balance sheet are represented in the following:

- Compliance with legal requirements of capital inside Egypt

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)
Notes to the financial statements - For the period ended 31 March 2020

- To protect the Bank's ability to continue as a going concern and enabling it to generate return for shareholders and other parties dealing with the Bank.
- To maintain a strong capital base to enhance business growth.
- Capital adequacy and uses are reviewed according to the regulatory authority's requirements (CBE in Egypt) daily by the Bank's management through models based on the instructions of Basel committee for banking supervision. The required data is submitted to CBE on a quarterly basis. CBE requires the following from the Bank:
 - Maintaining EGP 500 million as a minimum limit of paid and issued capital.
 - Maintaining a ratio that is equal or more than 10% between the capital base items and risk-weighted assets and contingent liabilities components.

Second: According to the new restrictions issued on December 18, 2012, the numerator of capital adequacy ratio consists of the following two tiers:

Tier 1:

First tier consists of two parts which are ongoing capital and supplementary capital.

Tier 2:

Which is subordinate capital and consists of the following:-

- 45% of reverse amount of required foreign currency transfer differences.
- 45% of special reserve amount.
- 45% of increase in fair value over book value of financial investments (if required).
- 45 % of the fair value reserve of available for sale financial investments.
- 45% of increase in fair value over book value of financial investments at amortized cost
- 45 % of the increase of fair value over the carrying amount of financial investments in affiliates and subsidiaries.
- Mixed financial instrument.
- subordinate loans (deposits) with amortization of 20% of their value over each year of the last five years of their terms.
- Impairment loss of performing Loans and facilities, and contingent liabilities (it shall not exceed 1.25% of total credit risks of risk weighted performing assets and contingent liabilities. Also, the impairment loss provision of non-performing loans, credit facilities and contingent liabilities shall be sufficient to meet the liabilities for which the provision is made.
- Disposals of 50% from Tier 1 and 50% of Tier 2.

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)
Notes to the financial statements - For the period ended 31 March 2020

- With respect to the value of assets reverted to the Bank for the settlement of debts in general banking risk reserve.
- When calculating the total numerator of the capital adequacy ratio, subordinated loans (deposits) shall not exceed 50% of the first tranche after exclusions.
- Assets and contingent liabilities are weighted by credit risk, market risk, and operational risk.

The denominator of the capital adequacy ratio consists of the following:-

- Credit risk.
- Market risk.
- Operational risk.

Assets are risk weighted classified according to the nature of each debtor of an asset to reflect the credit risk associated therewith and taking into consideration the cash collateral.

The same treatment is used for the off-balance amounts after making relevant adjustments to reflect the contingent nature and the potential loss for these amounts.

The below tables summarizes capital adequacy ratio according to Basel 2 at the end of the period and prior year:

Notes to the financial statements - For the period ended 31 March 2020

Financial risk management

Financial leverage ratio

Ratio components

a. Numerator elements

- The numerator consists of tier 1 of capital (after exclusions) that is used in capital adequacy standard currently applied in accordance with the instructions of the Central Bank of Egypt.

b. Denominator elements

- The denominator consists of all the Bank's assets on and off-financial position items according to the financial statements, called "Bank Exposures" including the following totals:

1. On Balance Sheet exposure items after deducting Tier 1 exclusions for capital base.
2. Exposures resulting from financing securities.
3. Off-financial position exposures "weighted exchange transactions".

Tier 1 of Capital after disposals (1)

	31 March 2020 000' EGP	31 December 2019 000' EGP
Cash and Due from Central Bank	7,895,889	7,592,548

Total in-balance sheet and off-balance sheet exposures (2)	75,751,151	75,249,098
Financial leverage ratio (1/2)	10.42%	10.09%

4- Significant accounting estimates and assumptions

The Bank uses estimates and assumptions affecting the reported amounts of assets and liabilities that are disclosed during the next financial year. Estimates and assumptions are constantly evaluated on the basis of historical experience and other factors, including expectations of future events that are believed to be reasonable under the circumstances and information available.

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)
Notes to the financial statements - For the period ended 31 March 2020

A) Estimates:

Information on estimates used in applying accounting policies that have a significant effect

Amounts recognized in the financial statements:

- **Classification of financial assets:** Evaluate the business model in which the assets are held and assess whether the contractual terms of the financial assets will generate cash flow in the form of payment of returns and installments on the outstanding balances of those assets.

B) Uncertainty associated with assumptions and estimations:

The uncertainty associated with the assumptions and estimates with high risk that result in material changes in the year ended 31 December 2019 are reflected in the following notes:

- Estimation of fair value of financial instruments using unobservable inputs in the measurement.
- Measurement of defined benefit obligations: key actuarial assumptions.
- Recognition of deferred tax assets: the existence of future taxable profits from which to benefit from the tax losses carried forward

C) Income taxes

The income tax on profit or loss for the period includes both the current and deferred taxes. Income tax is recognized in the statement of income, except for income taxes related to equity items that are recognized directly in equity.

The income taxes based on net taxable profit are recognized by using the tax rates enacted at the date of the Balance Sheet in addition to the tax adjustments related to previous years, and liabilities in accordance with the principles of accounting and its value according to the tax regulations. The value of deferred tax is determined based on the expected manner of realization or settlement of the values of the asset values and liabilities by using tax rates enacted at the date of the financial statements.

The Bank's deferred tax assets are recognized if it is probable that sufficient taxable profits will be realized in the future whereby the asset can be utilized. The value of deferred tax assets will be reduced by the value of the portion not yielding the expected tax benefit during the following years. However, in case the expected tax benefit increases, the deferred tax assets will increase to the extent of previous reduction.

16- Financial derivatives

Derivatives

The Bank uses the following derivative instruments for hedging and non-hedging purposes:

- Currency forwards contract represent commitments to purchase foreign and domestic currency, including undelivered spot transactions. Future foreign currency exchange contracts and/or interest rates are contractual obligations to receive or pay a net amount based on changes in currency rates, interest rates and/or to buy or sell foreign currency or a financial instrument on a future date at a specified price, established in an active financial market.

Credit risk at the Bank is considered low. Future interest rate agreements represent future exchange rate contracts negotiated on a case-by-case basis. These agreements require financial settlements on a future date for the difference between the contractual interest rate and the interest rate prevailing in the market on the basis of an agreed contractual amount/ nominal value.

- Currency and/or interest rate swap contracts are commitments to exchange one set of cash flows for another. These contracts result in the exchange of currencies or interest rates (i.e. fixed rate for floating rate) or a combination of all these (i.e. Interest and currency swap contracts). Actual exchange of contractual amounts is not done unless in some currency swap contracts.

The Bank's credit risk is represented in the potential cost to replace the swap contracts if other parties fail to fulfil their obligations. This risk is monitored on an ongoing basis by comparison with the fair value a percentage of the contractual amount. For the purpose of monitoring the existing credit risk The bank evaluates other parties by the same approached used in lending activities

- Foreign currency/ interest rates option contracts represent contractual arrangements in which the seller (issuer) grants the buyer (holder), the right not the obligation, either to buy (buy option) or to sell (sell option) at a certain date or within a certain period by a certain amount of foreign currency or a financial instrument at a predefined price. The vendor receives a commission from the buyer in return for accepting the risk of the foreign currency or the interest rate. Option contracts are either traded in the market or negotiable between the Bank and one of its customers (off the counter). The Bank is exposed to credit risk for the purchased option contracts only within its book value which represents its fair value.
- The contractual amounts of certain types of financial instruments are used as a basis for comparison with financial instruments recognized in the balance sheet but do not necessarily indicate the

NATIONAL BANK OF KUWAIT - EGYPT (S.A.E)
Notes to the financial statements - For the period ended 31 March 2020

amounts of future cash flows or the current fair value of the instruments and therefore, do not indicate the Bank's exposure to credit or price risks.

Derivatives in favor of the Bank become (assets), otherwise they become (liabilities) as a result of fluctuations in foreign exchange rates or interest rates related to them. The aggregate contractual/notional amounts of the existing financial derivative instruments, the duration to which the instruments are favorable or unfavorable to the Bank, and the aggregate fair value of financial assets and liabilities from financial derivatives can fluctuate from time to time.

Derivatives are represented in liability shown in the table below:

Derivatives retained at fair value through profits and losses:
